

The Digital Safety Signature System

A step-by-step guide to sending safety topics to your team, collecting digital sign-offs, and tracking who participated — start to finish.

01

The Form

Microsoft Forms — what employees read and sign.

02

The Library

GitHub — where every safety-topic PDF is stored.

03

The Workbook

Excel — where responses and participation live.

START HERE

How the system works

The Digital Safety Signature System lets you push out a safety topic to your employees, capture a digital signature confirming they read and understood it, and automatically measure how many people took part — no paper, no manual tallying.

The whole thing runs on three tools that hand off to one another. Once you understand what each one does, the routine becomes simple and repeatable.

TOOL 01

The Form

A Microsoft Form titled AgraTech's Safety Sign In Sheet. Employees open it, read the linked safety topic, and sign to confirm they understood it.

TOOL 02

The PDF Library

A GitHub repository that stores every safety-topic PDF. Each PDF has its own web link, which you drop into the Form each period.

TOOL 03

The Data Workbook

An Excel file that collects every response, tracks which employees were sent the form, and calculates the participation rate for you.

The routine, at a glance

Every time you roll out a new safety topic, you follow the same six-step loop. The rest of this guide walks through each step in detail.

1

Prepare the topic PDF

Confirm the topic's PDF is in the GitHub library and copy its link.

2

Update the Form

Swap in the new topic link at the top of the Microsoft Form.

3

Flag your recipients

In the workbook, mark which employees should receive the form.

4

Send the Form

Share the link with your flagged employees by email.

5

6

Log the topic

Record the topic details and how many people it went to.

Track participation

Watch responses arrive and the participation rate calculate itself.

READ THIS FIRST

Before you run your first cycle, take a few minutes to open the workbook and click through its sheets. Getting familiar with where everything lives now will save you time later.

TOOL 01

1 The Safety Sign-In Form

This is the Microsoft Form you send to your employees. It shows them the current safety topic and asks them to sign off that they've read and understood it.

At the top of the form, in **Section 1**, there's a link to the current safety topic. Below it, the form asks the employee to enter the topic code, confirm they read the sheet, choose their project, and sign with their full name.

THE FORM AS EMPLOYEES SEE IT — THE BOXED AREA HOLDS THE SAFETY-TOPIC LINK YOU UPDATE EACH PERIOD.

THE ONE THING YOU MUST UPDATE EACH PERIOD

Before you send the form, replace the safety-topic link in Section 1 with the link for the **current** topic. That link comes from the GitHub PDF library (covered in Tool 02). If you forget this step, employees will read and sign for the wrong topic.

Sharing the form with your employees

When the topic link is set, you're ready to send. Open the **Collect responses** button in the top-right of the form.

CLICK "COLLECT RESPONSES" TO OPEN THE SHARING PANEL.

A panel opens where you choose how the form is shared. Set it so **anyone can respond**, then use **Copy link** to grab the shareable URL.

SET "ANYONE CAN RESPOND," THEN COPY THE LINK TO SHARE IT.

- 1 **Copy the link** and paste it into an email to your employees, or
- 2 **Send it directly** by entering the list of employee emails for everyone you've decided should receive the form this period.

WHO SHOULD RECEIVE IT?

The list of "eligible" employees isn't guesswork — you set it in the workbook by flagging recipients on the Active Employees Data sheet. That same flagging step is what powers your participation rate later, so it's worth doing carefully. See Tool 03.

TOOL 02

2 The Safety Topic PDF Library

Every safety-topic PDF is stored in one place: a GitHub repository. This is where the link you paste into the form comes from.

The repository (**AmyJessop/safety**) holds all of the safety-topic PDFs. Each PDF has its own web address, and that address is what you use to update the topic link in the Microsoft Form each period.

THE GITHUB REPOSITORY — EACH PDF IN THE BOXED LIST HAS ITS OWN SHAREABLE LINK.

HOW THE LINK FLOWS THROUGH THE SYSTEM

A topic's PDF link is used in **two places** and they must match: it goes into the **Form** (so employees can read it) and into the **Safety Topics Data** sheet of the workbook (so the topic is logged). Copy it once from GitHub and reuse it in both spots.

3 The Data Workbook

This is the Excel file — AgraTech's Safety Sign-In Data — where every response lands and where your participation numbers are calculated. It's the heart of the system, so it's worth knowing your way around it.

Start with the Sheet Guide (README)

The workbook opens with a **Sheet Guide (README)** tab that explains what every other sheet does. Read it once so you know where each piece of information lives.

Sheet	Purpose	Contents
Form Responses (Dont Modify)	Raw form submission data pulled directly from Microsoft Forms. Do not edit.	Submitted employee responses including name, email, project, and safety topic entries. Range protected with a password to prevent edits.
Responses	Working sheet for reviewing and correcting employee name mappings.	Col L - Mapped Employee Name - Formula: Auto-mapped employee name using a formula. Do not edit any cells under this column or the formula will break. Col M - Override Mapped Employee Name: Manual correction column. Type the correct name here if the auto-mapping is wrong. Col N - Final Mapped Employee Name: Final result combining L and M. Always reflects the correct name. Use this column for any reporting or lookups.
Active Employees Data	Live employee reference data.	Pulls employee records directly from AAPro_Data. Automatically updates when new employees are added to the master file.
Projects Data	Live project reference data.	References project records directly from AAPro_Data. Automatically updates when new rows are detected in the master file.
Safety Topics Data	Manual reference list of safety topics.	Lists safety topics, their topic codes, and the expected number of employees required to complete the form for each topic. Manually maintained.

THE README TAB — A PLAIN-LANGUAGE MAP OF EVERY SHEET IN THE WORKBOOK.

The Responses sheet

This sheet holds every answer submitted through the form: who signed, what they entered, and when. It fills in automatically as employees respond — you don't type into it.

COLUMN G IS WHERE YOU FLAG WHICH EMPLOYEES SHOULD RECEIVE THE FORM.

DO NOT EDIT

Leave columns A through F alone. They're populated automatically from AApro. Changing them can break the employee data feeding the rest of the workbook.

Column G — **"Send Form to Employee?"** — is the one you fill in. Mark it TRUE for every employee who should receive the form this period. This does two things: it builds your final send-to email list, and it drives the participation-rate math on the next sheet. Flag it accurately and everything downstream just works.

This is where the numbers live. Each row represents one safety topic, and it's where you log a new topic and see how many people took part.

Topic Title	Topic Date	Topic Code	PDF URL	Number of Employees Sent Form Link	Number of Employees that Signed	% that Participated
Test	4/1/2026	AT-12345			0	0.00%
Secure It Back, Tuck It In	4/6/2026		763 http://safety.agratec.us/Toolbox-Safety-Secure-It-Back-Tuck-It-In.pdf			
Hard Head or Hard Hat	4/20/2026		902 https://safety.agratec.us/Toolbox-Safety-Hard-Head-or-Hard-Hat.pdf			

Current # of Employees with Form: 5

Safety Topics Data

THE SAFETY TOPICS DATA SHEET — ONE ROW PER TOPIC, WITH PARTICIPATION CALCULATED ON THE RIGHT.

Every time you introduce a new topic, add a row and fill in these fields:

FIELD	WHAT TO ENTER
Topic Title	The name of the safety topic for this period.
Topic Date	The date the topic goes out.
Topic Code	The code shown on the topic sheet.
PDF URL	The topic's link, copied from the GitHub library (Tool 02).
# of Employees Sent	The step people forget. Enter how many employees you sent this topic to. This number sets the participation rate.

LET THE WORKBOOK COUNT FOR YOU

You don't have to count recipients by hand. As long as you've flagged people correctly in Column G of the Active Employees Data sheet, the **Current # of Employees with Form** figure shows the true, live count automatically — use that number as your reference.

	A	B	C	D	E	F	G	H	I	J
1	Topic Title	Topic Date	Topic Code	PDF URL	Number of Employees Sent Form Link	Number of Employees that Signed	% that Participated			
2	Test	4/1/2026	AT-12345			0	0.00%		Current # of Employees with Form:	5
3	Secure It Back, Tuck it in	4/6/2026	763	http://safety.agratec.us/Toolbox-Safety-Secure-It-Back-Tuck-it-in.pdf						
4	Hard Head or Hard Hat	4/20/2026	902	https://safety.agratec.us/Toolbox-Safety-Hard-Head-or-Hard-Hat.pdf	5					

HERE, "5" WAS ENTERED — MATCHING THE LIVE COUNT GENERATED FROM THE FLAGGED EMPLOYEES.

Once that number is in, the sheet compares it against the signed responses and produces your **participation rate** for the topic — the single most important figure the system gives you.

PUT IT TOGETHER

Your routine for each new topic

Here's the whole system as a simple checklist. Run through it top to bottom each time you roll out a new safety topic.

- ☐ **Confirm the topic PDF is in GitHub** and copy its link from the AmyJessop/safety repository.
- ☐ **Update the Form** — paste the new link into Section 1 of the Microsoft Form, replacing the previous topic.
- ☐ **Flag your recipients** — in the workbook's Active Employees Data sheet, mark Column G as TRUE for everyone who should receive it.
- ☐ **Send the Form** — open **Collect responses**, set "Anyone can respond," and share the link by email.
- ☐ **Log the topic** — on the Safety Topics Data sheet, add a row with the title, date, code, PDF URL, and number of employees sent.
- ☐ **Track participation** — watch responses land on the Responses sheet and read your participation rate on the Safety Topics Data sheet.

TWO THINGS NOT TO SKIP

Everything hinges on two easy-to-forget steps: **updating the topic link** in the form, and **flagging Column G** for the right employees. Get those two right and the rest of the system takes care of itself.
