SECURE IT BACK, TUCK IT IN

Caught in or between hazards includes many different types of risks. We will focus on the importance of having long hair pulled back and secured, as well as the risks of loose-fitting clothing that could pull you into rotating or moving equipment.

Long hair must be secured to avoid severe injury that could result from entanglement in machinery or power tools.

Secured: Tie hair back securely in a high bun or knot. Simple ponytails can still get caught.

Covered: Use bandanas, buff tubes, or hard hat liners to keep hair clean and safe.

Hazard Areas: Use extreme caution or extra restraints around rotating tools, lathes, belts, chains, saws, and drilling equipment.

Be professional: Wash hair daily and never let it down on the job site.

Loose clothing in construction is a major safety hazard that can lead to severe injuries or fatalities. It can also catch on materials, causing trips and falls. Key risks include untucked shirts, unbuttoned long sleeves, dangling strings, and jewelry.

Tuck it in: Keep shirts, hoodies, and jackets tucked in and buttoned.

Avoid loose items: Scarves, long ties, dangling jewelry, bracelets, watches, and extra-long belts.

Wear proper fit: Ensure clothes fit well and are not too baggy or too tight, as tight clothing can limit movement.

Check pockets: Avoid loose, flapping pockets.

Footwear: Ensure shoelaces are tied securely and avoid overly loose trousers.
